Amrita Books Mobile Application (Digital Reader Companion)

Document Version: 1.2.0

Date: July 16, 2026

Status: Draft

Author: AI Pair Programmer

1. Executive Summary & Objectives

The **Amrita Books Mobile Application** is a companion digital eReader designed for mobile devices. The Mobile App has **no self-signup or registration flows** and **no checkout payment options**. It functions exclusively as a gated portal for users who have either purchased eBooks or hold active subscriptions through the Amrita Books web portal.

Its features are strictly limited to:

1. **Library:** Accessing, managing, and reading added eBooks (including secure offline downloads).
 2. **Explore:** Browsing the catalog and adding subscribable books directly to the user's library.
 3. **Notifications:** Receiving and viewing push notifications.
-

2. Gated Authentication & Access Rules

- **Allowed Users:** Customers with at least one digital eBook purchase, or members with an active, unexpired subscription plan.
 - **Prohibited Users:** General public and users without active digital book ownership or subscriptions.
 - **Sign-up Restriction:** All user accounts must be registered on the Web Portal. Logging in checks credentials; if valid but the user has no digital ownership or active subscription, access is blocked with an explanation redirecting them to the Web Store.
-

3. Core Module Requirements

The mobile app layout is structured around 3 primary tabs: **Library**, **Explore**, and **Notifications** (plus a settings slide-out/modal).

3.1 Gated Login Page

- Email and password inputs with validation checks.
- Restricted accounts show a warning overlay:

Access Restricted

The Amrita Books Mobile App is a companion eReader reserved for eBook owners and active subscribers. Please purchase an eBook or subscribe on our website to continue.

3.2 Library Tab (My Books & eReader)

- **Library Grid:** Displays covers of books currently in the user's library (either purchased or added from the Explore tab).
 - Tapping a book opens the eBook Reader.
 - Includes a download trigger to pull books locally to the device for **Offline Reading**.
- **Secure Offline Storage:** Downloaded book files are stored securely in the app, preventing access from external file managers.
- **Built-in eBook Reader:**
 - Full-screen distraction-free reader interface.
 - Page-turning swipe gesture or margin taps.
 - Customizer Panel: Theme toggles (Light, Sepia, Night), font sizing, and font selection.

- **Bookmarks & Highlights:** Save quotes and earmark page counts. Syncs to the cloud when connected to the internet.

3.3 Explore Tab (Discover & Add Books)

- **Catalog Browsing:** Lists the digital books available in the Amrita Books catalog. Allows filtering by language, category, or title search.
- **"Add to Library" Action:**
 - **For Active Subscribers:** Digital-subscribable books feature an [**Add to Library**] button. Clicking this instantly updates their subscription library state and adds the book to their Library tab without any checkout forms.
 - **For Non-Subscribers:** Shows a disabled status or a [**Purchase on Website**] notice for purchasable eBooks that are not owned.

3.4 Notifications Tab (Inbox Ledger)

- Displays a chronological list of push alerts sent from the Admin Portal (e.g. Satsang announcements, new book releases).
- Integrates with the mobile device's push notification system to receive alerts in the background.
- Tapping a notification redirects the user to the target book page inside the Explore tab or immediately opens it in the eReader if it's already in their Library.

3.5 Settings Modal

- Renders read-only user account information.
- Storage utility: Displays disk space occupied by cached books, with a "Clear Downloaded Files" option.
- Manual sync trigger and Log Out.

4. Operational Workflows & Sync Engine

4.1 "Explore & Add" Subscription Sync Flow

```
sequenceDiagram
    actor Subscriber as User
    participant Mobile as Mobile App Client
    participant API as API Server
    participant Storage as User Library Database
```

```
Subscriber->>Mobile: Open Explore Tab & Search Book
Mobile->>API: Fetch Book Details & Check Subscription Status
API-->>Mobile: Book details (Subscribable) + Status (Active)
Mobile-->>Subscriber: Renders "Add to Library" Button
Subscriber->>Mobile: Click "Add to Library"
Mobile->>API: Request addition of Book ID to User Library
API->>Storage: Record Book ID mapping in user profile
API-->>Mobile: Confirmed (Success)
Mobile->>Mobile: Add Book to local Library cache
Mobile-->>Subscriber: Show Toast: "Added to Library!"
```

4.2 Syncing Engine

- Handles syncing of reading progress (page indexes, bookmarks, highlights) between the Web and Mobile app.
- Checks subscription validations periodically; if a user's subscription expires on the Web database, the Mobile app locks access to downloaded subscription books during the next online check.
- Supports offline reading progress saving; when offline, bookmarks and progress are cached locally and merged with the server database when an internet connection is restored.
